

Laservall provide laser marking systems to the **Spanish government** for the DNI project

Lasers are being used in ever more sectors and for ever more applications. The Laservall laser sources have been selected for applications in extremely competitive sectors, where the high-quality of the overall product, and of the laser beam in particular, are recognized. The "Identification & Security" sector is a perfect example. Laservall offers innovative solutions for the field of personal identification and security. The solutions build on the well-established experience gained over the years in the marking sector.

Thanks to the high-quality of its laser sources, Laservall is at the "core" of the Spanish DNI project (Documento Nacional Identificación).

Besides for the performance of its laser sources, Laservall has also distinguished itself for its efficient project management. The following results were achieved:

550 machines

6 months to produce and install the machines

more than 2 million cards

On learning that his company had won the tender, Laservall's CEO, Guglielmo Piazzì, commented: "The DNI project is yet another success story that makes us feel very proud of our achievements".
